

Customer Solution

eharmony desired to understand the ease-of-use and potential benefits of moving their applications to a containerized Kubernetes environment in the Google Cloud. The pilot project demonstrated not just the ease of running an application in the cloud, but also the platform's capability to rapidly develop both Infrastructure and application code in a CI/CD pipeline facilitating rapid introduction of new applications and features.

Infrastructure
as Code

CI/CD
pipeline

Kubernetes

- eharmony is located in Los Angeles, CA.
- The client needs to keep up with rapidly changing business and technology realities. The Google Cloud, including Kubernetes and a continuous improvement and continuous deployment pipeline, provides the ability to scale the application to meet online demand and to enhance the application to meet evolving needs.
- Built by Maven Wave.
- This project demonstrated the ease and value of CI/CD for both infrastructure and application deployment, and the ease of implementing applications in Kubernetes.
